

GNR YM1240 Mobile Washing and Screening Plant

GNR YM1240 Mobile Washing and Screening Units are used for sand washing from 40 to 300 TPH capacity for Stream, and Mountain sand. The material loaded into the chamber with the ladle is carried to the screen with the belt and the sieved material is separated and poured into the stock areas from the by-pass belt. It can also work with the help of a generator installed on the facility. In places where there is no electricity line.

General features :
High Capacity and Performance
Easy to Transport
Ease of Operation
